

## Raspberry Pi Final – Google Headquarters – 1<sup>st</sup> May 2025

On Thursday 1st May, students attended the Raspberry Pi Final at Google Headquarters in London, where they showcased their projects to a panel of expert judges and industry leaders.

This year's brief challenged students to explore how we can build a safer, healthier, and happier world - where organisations and individuals choose to do better for both people and the planet.

We are incredibly proud to share that two teams from our school reached the finals in this category - a remarkable achievement!

### Year 10 | Team PiFace

*Likhit, Iftexhar, Jathusan, Terry, Franek, Jamie, Vladimir*

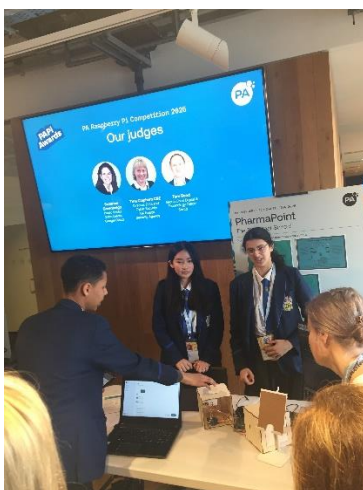

The team developed a project using AI and facial recognition to bring enhanced security to the home - only allowing entry to visitors whose faces were stored in a secure database.

### Year 11 | Team PharmaPoint

*Tara, Zitong, Gideon*

This team created a solution to support secure and convenient prescription dispensation and collection, enabling patients to access medication at a time that suits them.

Both teams competed in the same age category, meaning there could only be one winner.

**🏆 We are thrilled to announce that the top prize went to Team PharmaPoint - congratulations to Tara, Zitong, and Gideon!**

We are incredibly proud of both teams for their dedication, creativity, and technical skill. Well done to all involved!
